Items commonly accepted include mattresses, washers, dryers, furniture, and more. Please confirm the pickup date before placing items at the curb.JobsJobsJobsThe items that can be put in a residential or commercial dumpster may vary depending on the specific dumpster rental company and local regulations. However, in general, the following items are typically allowed in dumpsters:Household or commercial waste, such as paper, cardboard, plastics, and textilesConstruction and demolition debris, including concrete, brick, wood, and roofing materialsYard waste, such as grass, leaves, and branchesAppliances, such as refrigerators, stoves, and washing machines (in some cases, an additional fee may be required)Furniture, such as couches, chairs, and mattressesIt is important to note that certain items may not be allowed in residential or commercial dumpsters. This can include hazardous materials such as chemicals, batteries, and medical waste. Additionally, local regulations may prohibit certain items from being disposed of in roll off bins, so it is important to check with American Disposal or local authorities before putting any questionable items in the dumpster.JobsHazardous waste is not normally collected with regular residential garbage service. Here are some general guidelines to dispose of hazardous waste:Identify Hazardous Materials: Determine which materials you have that are considered hazardous. Common household hazardous waste includes paints, solvents, pesticides, automotive fluids, batteries, electronics, and certain cleaning products. Use Authorized Collection Centers: Some local areas have authorized collection centers or hazardous waste disposal facilities. These facilities are equipped to handle and dispose of hazardous materials safely.Follow Packaging Instructions: When preparing hazardous waste for disposal, follow the packaging and labeling instructions provided by your local authorities. Typically, you'll be asked to use specific containers and label them appropriately.Never Mix Materials: Do not mix different types of hazardous waste together, as this can create dangerous chemical reactions. Keep them separate.Dispose of Electronics Properly: If you have electronic waste (e-waste), such as old computers or phones, consider recycling them through authorized e-waste recycling programs. Many electronics contain hazardous materials.Pharmaceuticals: To dispose of unused or expired medications, follow the guidelines set by local pharmacies or law enforcement agencies. They often have take-back programs for safe medication disposal.Aerosol Cans: Empty aerosol cans that held non-hazardous materials can typically be included in regular recycling, but check with your local recycling guidelines.Reduce Usage: Whenever possible, try to reduce your use of hazardous materials by opting for safer alternatives and using up existing products before purchasing new ones.It's crucial to follow your local regulations and guidelines for hazardous waste disposal, as they can vary by region. Disposing of hazardous waste improperly can harm the environment and pose risks to public health, so it's essential to handle these materials responsibly.
