Photo credit: Heather Eldridge (CleverHiker.com) The best approach to looking at the INIU 20000 PD is through the lens of a 20,000 mAh power bank. Compared to 10,000 mAh battery packs, its performance levels typically won't stand up due to its larger battery size. Larger capacity power banks are a different matter: it is a strong contender and one of our favorite power bank picks. Overall, it is our second-best large-capacity power bank in weight, charging speed, and portability, and it ranks as the best 20,000 mAh power bank in many categories. We like that it is the second most efficient power bank out of all the banks we tested, which means you get a lot of power for what is being carried. While it struggles to stay efficient in colder temperatures, many of its features and a very affordable price tag make this one stand out for us. Best 20,000 mAh Power Bank CleverHiker Rating: 4.4/5.0 Price: \$33 Weight: 12.2 oz. mAh: 20,000 Time to full charge: 6 hrs (USB-C) Very affordableLots of power in comparison to the weightDecent charging speed compared to sizeLarge digital battery display Poor performance in cold weatherA bit bulky Convenient and long-lasting, the INIU 20K PD is great for a group or couple on a long backpacking trip. - PHOTO CREDIT: CASEY HANDLEY (CLEVERHIKER.COM) We like getting the most bang for our buck in terms of the number of phone charges available, and the INIU 20000 PD is above average. Our testing process included draining an entire battery bank using a multimeter and a dummy resistor load to draw and measure a consistent charge. We used that information to figure out how much power is available per ounce, making it easier to compare different size capacities and tell us which power banks are the most efficient. The INIU is a strong contender in this category and offers a reasonable tradeoff, given that the 20000 PD weighs more than any of the 10,000 mAh power banks. INIU 20000 PD is heavier because it is loaded down with double the charging capacity as the 10,000mAh options on the market. - Photo Credit: Bailey Bremner (CleverHiker.com) Don't let the INIU's heavier weight compared to smaller capacity power banks dissuade you. Compared to other large-capacity power banks, the 20000 PD still performs well. When we put it on our scale, it registered at 12 ounces, 0.8 ounces lighter than what the INIU website claims. When we rank that among our favorite high-capacity battery packs, it is a top contender. While we were disappointed that it weighs more than an even larger capacity power bank, it was the lightest of our 20,000 mAh banks and weighed less than almost any 10,000 mAh battery pack we tested. When diving deeper into the lightest way to carry 20,000 mAh, the INIU 20000 PD is one of the best choices. Due to the larger volume that a higher-capacity battery needs, a 20,000 mAh power bank like the INIU will never be as portable as a smaller battery pack. They generally are more difficult to fit into hipbelt pockets and cause tent pockets to sag under their increased weight. The 20000 PD is one of the more portable models we tested, but it felt bulky compared to many of the smaller power banks. We tend to reach more often for the INIU over the Boliote and UGREEN models because the more compact shape makes it easier to hold in hand. Like most portable power banks, they can handle the accidental drop or jostling in the pack, but it is up to the dirt-bag backpacker to keep the ports clean so the connections are good. - Photo Credit: Bailey Bremner (CleverHiker.com) At first glance, the INIU 20000 PD appears to be prone to damage, but our tests concluded that it can withstand the rigors of the outdoors. Like the INIU Megapower 10000 power bank, the 20000 PD has an outer layer prone to scratches. Fortunately, in our experience, it is just cosmetic and doesn't affect the overall performance. Initially, we were concerned that the digital display would also be prone to scratches or cracks, rendering it challenging to read. However, after putting the INIU through our eight-foot drop test and using it on multiple trips, we did not notice any wear or tear. This model does come with a protective sleeve that can be used to prevent scratches in exchange for a minor weight penalty. INIU 20000 PD's Pass-through charging allows your devices to charge through the battery while the bank fuels up as well. - Photo Credit: Bailey Bremner (CleverHiker.com) Charging speed is another area where the 20000 PD is one of the top large-capacity power banks. After charging the INIU from dead to 100%, we found that it takes five hours and fifty-five minutes to complete the task. Once again, it is under the official specs listed on INIU's website. However, this is quite a bit slower than most smaller-capacity power banks, so charging two 10,000 mAh power banks may be a better solution for some use cases. We used a QC 3.0 wall charger and a standard USB-C cable for all our tests to keep things fair. INIU 20000 PD's Digital Display is really handy to know roughly how to ration the battery's juice while you are out and about in the wilderness. - Photo Credit: Bailey Bremner (CleverHiker.com) Overall, the INIU has a nice blend of features, including pass-through charging, auto trickle charging, and a built-in flashlight. One of our favorite features is the digital display. Users should remember that no battery indicator is ever 100% accurate. Still, it gave us a much better idea of how much charge was left and was easier to read than some of the analog indicators on other models. Multiple ports, including two USB-A and one USB-C, allow numerous devices to be charged simultaneously. This power bank has built-in auto low voltage (trickle) charging for smaller electrical devices, and we appreciate that it does so without needing a toggle button. Like most power banks, this one provides pass-through charging. That means when it is plugged in and charging, you can plug in another device and charge it simultaneously. This is a great time saver when trying to charge multiple devices at once for those who may be thru-hiking or in another situation with limited outlets and wall plugs. Finally, like the INIU Megapower 10000, it has a built-in flashlight, which could be practical in an emergency. However, it has the same fatal flaw: it often gets bumped and accidentally turned on during the day or while sleeping, wasting battery. INIU 20000 PD isn't a big fan of cold temps. Just stuff it with your bag at night. - Photo Credit: Bailey Bremner (CleverHiker.com) During our testing, the 20000 PD struggled in low temperatures. After draining the battery in the fridge, our multimeter indicated how much power was used. After a few calculations, we found out that there is an 8.2% decrease in available power when working in cold conditions. This decrease was one of the worst performances out of all the power banks we tested. The 20000 PD might not be the best choice for people who frequently hike in colder temperatures. Keeping the battery close to the body or inside a sleeping bag can help reduce the capacity loss for those who may encounter the occasional cold snap. The INIU 20000 PD does a great job in a neat little rectangle. - Photo Credit: Bailey Bremner (CleverHiker.com) For the average power bank user who only needs a few charges per backpacking trip or a day-to-day accessory, the INIU 20000 PD may not be worth the extra weight. This battery pack shines for those needing more power, such as backpackers or travelers who will be away from outlets for extended periods. We have also noticed that folks who use a lot of battery on trips, such as those who like to take a lot of videos or who use GPS apps to track their route, are often less stressed out about battery conservation when bringing a larger capacity power bank such as the INIU along. BioLite Charge 80 PD Review: For those who want 20,000 mAh of capacity, this is another great bank. This rugged brick is built to stand up and is an excellent choice when durability is vital. Charmast 26800 mAh Review: this even larger power bank hung close to the INIU in almost all of our tests with a reasonable weight, excellent efficiency, and slightly better portability. The biggest downside is a much larger charging time, but that is a tradeoff to consider for the increased capacity size. Nitecore NB 10000 Gen 3 Review: Another top option is the Nitecore NB 10000 Gen 3. With a total capacity of 20,000 mAh if you use two of them, there is more flexibility to cut weight if you end up needing a lower capacity. Why you can trust TechRadar We spend hours testing every product or service we review, so you can be sure you're buying the best. Find out more about how we test. The Iniu PD 22.5w 20000mAh isn't the most capacious power bank on the market. But for its price, it will give you a whole lot of charges for not much money.The Iniu PD 22.5w 20000mAh doesn't rock a ridiculous number of features, but what's there is impressive, especially for the price. First of all it has a whopping 20,000mAh Lithium Polymer cell inside, which accounts for its bulk, which means it should keep charging your devices day after day. Additionally, with a USB-C and two standard USB ports, you're able to charge three devices at once.To really put the Iniu PD 22.5w 20000mAh through its paces, I took it away to a music festival and used it to charge my iPhone 12 Pro over the course of a long weekend. Charging my phone up to 100% once a day on the Saturday, Sunday, and Monday only depleted the battery down to 54%, meaning you may well get almost a week's worth of charge out of it if you aren't fully draining your phone every day. That's more than many of the best power banks can deliver.On top of this, the Iniu PD 22.5w 20000mAh offers 22.5W charging, which is fine for the max charging the best iPhones require, although falls quite a way short of the 100W that the best Android phones like the OnePlus Nord 4 are capable of drawing, and means you won't be charging a MacBook off it. In practice though, during a separate test, this meant it took 128 minutes to charge the iPhone 13 Pro's 3.095mAh battery, which could be much worse.Looks-wise, the Iniu PD 22.5w 20000mAh is a nice-looking battery, while not being so stunning that you're going to be terrified of damaging it. It comes with a pleasing matte finish in either black or white. An LCD screen on the front of the device tells you exactly how much charge is left - far more useful than the series of LEDs some power banks employ.At an inch thick and weighing 12.8oz (323g), this power bank has got some serious chonk to it. It also doesn't have any IP weatherproofing, meaning you really don't want to drop it in any puddles. In spite of this, it still sat comfortably enough in my pocket as I wandered around and boogied at the festival, and it survived a full day of torrential rain in the pocket of my damp jeans without much worry.For an affordable power bank, the Iniu PD 22.5w 20000mAh offers a serious amount of juice. While it doesn't provide features like fast charging or wireless charging, it's an obvious choice for anyone who wants to keep their phone topped up during a week away.(Image credit: Future)INIU PD 22.5w 20000mAh review: Price & specsSwipe to scroll horizontallyPrice\$31.99 / £28.89 (around AU\$46.41)Capacity20,000mAhTotal wattage22.5WNumber of ports3USB-C1 portWireless chargingNoWeight12.8oz / 363gPower-to-weight55.1mAh/g(Image credit: Future)Should I buy the Iniu PD 22.5w 20000mAh?Buy it if...Don't buy it if...
