Download Article Create a new Gmail address or recover an account without a phone number for Gmail but don't have one, there are still ways to sign up! In many regions, you can tap the Skip option on the phone number screen if you've provided a backup email address. If you don't have the
"Skip" option, you can get a temporary phone number or use a friend or family member's phone to verify. This wikiHow article teaches you how to sign up for a Gmail account without a phone number of your own, as well as what to do if you lose access to the phone or phone number you use to access your Google account. Creating a new Gmail
account without verifying a mobile phone number or borrow a phone numbe
account using 2-step authentication but can't access your phone, you can use your backup phone or backup codes. 1 Go to the New Account creation page. The steps are different depending on the platform you're using: On Android, iPhone, or iPad: In the Gmail app, tap your profile photo and select Add another account. Tap Google, and then tap
Create Account.[1] In a browser: Click this link to access the sign-up page. Because Google requires phone numbers in certain regions, this method will not work for everyone. 2 Follow the on-screen instructions until you reach the phone number entry screen. Depending on your platform, you may have to enter additional information, such as your
name, before entering your phone number. You must provide an email address to create an account without a phone number page. If it's possible for you to create an account without
verifying a phone number in your region, you'll see the option to skip this step. If you don't have the option to skip, this feature is not available in your region. In that case, you'll need to try another method. Advertisement 1 Get a temporary phone number that can receive texts. When you sign up for a new Google account, you'll need to verify a
confirmation code that can only be received via SMS or voice phone call. If you don't have your own phone number, here are a few ways you can use one temporarily: If you already have a separate Google toice phone number for free. See this wikiHow guide to learn more. Depending on
your region, you may be able to sign up for a disposable phone number. Legitimate versions of these services are rarely free—but services like Hushed and Text Verified are affordable and legitimate. [2] You can use someone else's phone and phone number during the verification process. The phone should be in the same room as you so you can get
the code. If that's not possible, you can email or chat with a friend online and ask if they will receive your confirmation code and provide it to you for verification. 2 Go to the New Account creation page. The steps are different depending on the platform you're using: On Android, iPhone, or iPad: In the Gmail app, tap your profile photo and select Add
another account. Tap Google, and then tap Create Account. In a browser: Click this link to access the sign-up page. 3 Follow the on-screen instructions until you reach the phone number entry screen. Depending on your platform, you may have to enter additional information, such as your name, before entering your phone number. 4 Enter your
temporary phone number and select Next. A special code will be sent to the number via SMS text message, follow the on-screen instructions to receive a phone call instead. 5 Verify the code begins with a "G" and will be in the body of the text message from Google. If you're using an Android, tap
Next. If you're using your web browser, click Verify. As long as the code is correct, you can move to the next step of the account. If you're using a phone number that won't belong to you long-term, remove it from your account so nobody can access your password. Here's how: On an
Android, iPhone, or iPad: Follow the on-screen instructions to create your email address and password is set, scroll down and tap More options, tap Do not add my phone number. If you see this
screen, click Skip to get to the next screen. If you don't see this, you should be at the right place—a form with a "Phone number from this blank, fill out the form, and click Next. 7 Complete the account setup process. Once you've completed the remaining steps, your Google account will be created and ready to use. No
phone number is associated with the account. If you weren't able to remove your phone number, go to in a web browser, click your phone number you've added to
your account, you can still recover it using your email address. If you set up 2-step authentication for your Gmail account, use this method instead.[3] This method will work best if you use it from a computer, phone, or tablet from which you've signed in to that Gmail account. [4] 2 Enter your username and click Next. You'll then be prompted for a
password.[5] 3 Click Try another way. It's at the bottom of the page. 4 Enter your recovery email address and click Next. You'll receive an email
from Google to your backup address that contains instructions for resetting your password. [6] Once you receive the confirmation email, click the link inside to reset your password. Step verification, you were given the option to designate a backup phone just in case you lose
access to your main phone. As long as you've done this, you can follow these steps to regain access to your account using the backup phone: [7] Go to the sign-in page and attempt to log in using the code sent to the
backup phone. 2 Use the backup codes associated with your account. If you didn't set up a backup phone, you might have chosen to write down an 8-digit backup code instead. The purpose of these codes is to get you back into your account if you lose access to your primary phone. To log in with your backup code instead. The purpose of these codes is to get you back into your account if you lose access to your primary phone. To log in with your account if you lose access to your primary phone.
attempt to log in. Click Try another way to sign in or tap More options. Select Enter one of your 8-digit backup codes. Enter your backup codes in using other information, such as your backup email address. 4 Have your phone
number forwarded to another number that works. If you can't log in to your Gmail account because your phone was lost or stolen and the previous steps did not work, you may be able to associate your phone number temporarily to another
mobile phone. You may even get a free replacement Written by: wikiHow Technology Writer and Editor for wikiHow. She has more than 20 years of

use our phones for so much more than making phone calls, and the thought of a stranger having access to all that data can make your stomach turn. Learning how to find your lost cell phone can help secure your information and give you peace of mind. This wikiHow article will teach you how to find any type of cell phone, including an Android or
iPhone. Try calling the phone number of your lost cell phone from another phone to see if it's nearby. If you lost an Android with Find My iPhone to find a missing iPhone, even if it's powered down or not connected to the internet. 1 Call your phone
number. The easiest way to find a cell phone is to call your phone number from another phone. You can do this to find any cell phone is to call your number, or use a free website service like CallMyPhone to dial your number from a computer. You can also use a
VoIP service like Google Voice to call your cell phone. If the ringer is turned off or your phone isn't nearby, this won't be helpful. Still, it's worth a try! If you lost an iPhone, use this method instead. 2 Have someone text your phone. A close second
to calling your cell phone is having someone else text your phone. If your phone is truly lost (as in lost at a public place, not misplaced around your apartment), you can have someone text your phone so that anyone who finds it might see the message and know how to reach you. If you can't find anyone to text your phone,
there are easy ways to text your phone from a computer. You can also try texting a reward offer to your phone. This may convince someone who finds your steps can help you find any lost or misplaced item, not just cell phones. However, if you had
your phone at an earlier location and have realized that you left your cell phone somewhere, retracing your steps can help you locate your mobile phone (as long as it hasn't been taken). Sit down for a moment and think about where you've been and what you've done. Consider when and where you last remember having or using your phone, and work
your way forward. If you went to any restaurants or stores before you lost your phone, try asking an employee, you should be able to describe your phone or tell the employee your phone number so he can call it and verify that it's yours. Whatever you do, don't panic.
Panicking will only worsen your situation and might make it difficult to concentrate or think clearly.[1] 4 Contact your provider service providers have GPS location service provider service pr
service number online, or look up your provider's local offices in a phone book. Advertisement 1 Go to in your web browser to find your lost Android, such as the one on your home computer, a friend's cell phone, or even a library computer. This
method will only work if your lost Android phone has location services and Find My Device enabled, is powered on, and is connected to either mobile data or a Wi-Fi network. [2] If your lost cell phone has run out of battery or isn't connected to either mobile data or a Wi-Fi network.
map. If you only have one device associated with this Google account, it will automatically appear on the map. If your phone is powered on, connected to the internet, and has Find My Device enabled, you'll see its current location on the map. If your phone is powered on, connected to the internet, and has Find My Device enabled, you'll see its current location on the map. If your phone is not connected to the internet, and has Find My Device enabled, you'll see its current location on the map. If your phone is not connected to the internet, and has Find My Device enabled, you'll see its current location on the map. you will see the phone's last known location instead. Your phone's current location on the map, you can retrieve your phone at or near that location (if it is safe to do so). Select Play Sound if the phone is nearby
you can't get to your lost phone and don't think you'll be able to get it back. This deletes everything on the phone (other than SD card data). If you do this, Find My Device will no longer be available on the phone or family member's phone or
computer, to track down your lost iPhone. Alternatively, if you have another iPhone, iPad, or iPod Touch logged in with the same Apple ID as your missing iPhone and location services must be enabled. Fortunately, these features are enabled by default. If you
haven't disabled Find My Network, you'll be able to find your phone's approximate location even if it's offline, in low power mode, and after it's turned off.[3] 2 Log in with your Apple ID. Make sure you're using the same Apple ID you use to log in to you're signed in, Find My will begin searching for your Apple devices. 3 Select you
accessed the internet, and some options for finding and securing your device. 5 Choose an action. If your lost iPhone is nearby, click Play Sound to make it easier to find. If not, you can choose another action depending on your needs: Turn on Lost Mode to lock your iPhone with a passcode and keep your data secure. This feature also disables Apple
Pay and allows you to add a phone number or other contact information to the display in case anyone finds your phone is in a location you can't get to, such as if it has been stolen and in someone's house. This deletes all of the data on your iPhone is in a location you can't get to, such as if it has been stolen and in someone's house. This deletes all of the data on your iPhone is in a location you can't get to, such as if it has been stolen and in someone's house.
safe. If you feel that your device has been stolen, do not try to retrieve it yourself. Instead, report it to the police and let them handle it. Trying to retrieve your phone yourself could land you in serious trouble and may even cost you your life. Smartphone insurance providers often want a police report if you intend to file a claim through your pre-paid
insurance option. Some phone companies may also require a police report to deactivate your account. 2 Cancel your accounts and the extent of it will depend on how much you use your phone for online interaction. For some, this may be very little, while for others, it could be a
huge task. You may also want to cancel any credit/debit cards that were registered to any online stores through that device (like the App Store, for example). If you're worried that the phone is in someone else's hands, the sooner you do this, the better, as identity theft is a serious and widespread issue. It's better to take the time to reset your
passwords and logins before physically hunting further for your phone. This will minimize the potential damage someone could do with access to your information, and if you do find your phone, then using new passwords is only a minor inconvenience. Start with your most important passwords. This typically includes email, bank accounts, social
media, and online storage. Deal with financial and personal information first. After you have changed your major passwords, you can reset passwords for less important services. 3 Contact your cellular carrier. Have your account details handy so your account can be deactivated until you get a new phone. Having your service provider cancel the
phone will help keep anyone who finds it from making unauthorized calls with your SIM card. If you have a phone that is paid by usage rather than prepaid, and you cannot find it within 2 hours, it usually is a better idea to call your phone company immediately and tell them to deactivate your phone. Advertisement 1 Enable your cell phone's tracking
tool. If you have an Android or iPhone, use Find My Device (Android) or Find My iPhone. To turn on these features: Android Open your Android's Settings and go to Security > Find My Device. If "Find My Device" is not toggled on, enable it now. iPhone Open your Android or iPhone.
ever lose your phone, you can report your serial/identification number to the police and your wireless provider. Depending on the model of the cell phone, your phone's unique ID may be called an IMEI (International Mobile Equipment Identifier), or ESN (Electronic Serial Number). The easiest way to get your
phone's IMEI or MEID is to dial *#06#* on your phone's keypad. 3 Have a designated place for everything. If you're prone to losing things, you may want to work on reducing the frequency of those losses, no matter what the item may be. Try getting into the habit of leaving things in particular places, which can help you know where to look next time
If you tend to lose your phone at home, try to keep it on a nightstand or coffee table whenever it's not on your person. When you leave. For example, you might tap your pockets to confirm in a particular order that you've got your keys, wallet
and cell phone. Advertisement Add New Question How do I track a lost or missing Moto E mobile? Use Android Device Manager to find your Moto E mobile? Use Android Device Manager to find your Moto E mobile? Use Android Device Manager to find your Moto E mobile?
you may report it to the police (if the device was stolen) and provide them with the traced location of the device. Question How do I find my android that I last used on October 2015? You can use Android Device Manager (the Android version of Find My iPhone) to hopefully find your Android device. See more answers Ask a Question Advertisement

"I had the sound
turned off, so I used my laptop to log into Google and first tried used Google's Device Manager to locate the phone, which did not work. The feature to make the phone ring did work, and even though I searched 3x, it was there!"..." more Share your story Our phones are part of our daily lives. They help us keep in touch with people, manage our
schedules, make payments, listen to music, work, store photos and videos, and more. For these reasons, losing or misplacing your phone can be a nightmare, especially if it isn't backed up, which would mean losing access to your personal data and files. With Google's built-in Find My Device, finding your lost Android phone doesn't take much time if
your phone meets certain conditions. You can even lock or erase the data to keep prying eyes away from your personal data. This information also works for Android tablets and Wear OS smartwatches. Related Locating your mobile phone's unique identification number is easy-peasy Android's anti-theft protection Google rolled out three anti-theft
features in October 2024: Theft Detection Lock, Offline Device Lock, and Remote Lock, and Remote Lock uses Google's AI and machine learning models to detect theft-related motions, such as if your phone has been forcefully snatched. Once locked, the phone cannot be unlocked even if the thief knows your PIN. Offline Device Lock automatically
locks the phone's screen if the phone remains offline for a while, as some thieves try to bypass remote blocking while offline or in airplane mode. Note that this only works twice a day. Remote Lock lets you lock your phone with just a phone number (it also requires bypassing a security challenge); this becomes useful when you cannot log in with your
password in Find My Device. These features may not be on by default. You can check by searching for "theft protection" in your Settings or Personal & device safety while on the Google services page. What you need to do before you lose your phone or tablet Find My Device used to require an active internet connection through mobile data or a Wi-Fi
network to work as expected. However, an update to the Find My Device network makes it possible to locate your Android phone even when it's offline. Pixel 8 and Pixel 9 users get another perk with the update. Pixel 8 and Pixel 9 users get another perk with the update.
Pixel 9 series, including the Pixel 9, Pixel 9 Pro, Pixel 9 Pro Fold. The concept works like Apple's Find My network, where your lost Android devices. The latest device whereabouts are transferred to Google's Find My Device network, which you can check through
another Android phone or the web version. If you want to lock or erase your lost Android phone, it must meet the following conditions: The Android phone needs sufficient power. It needs an active internet connection. It should be visible on Google Play. In most cases,
these conditions are met without requiring any action from you, but they may be clues to look at if you can't find your device. You can also check if Find My Device or Google > Find My Device. If it's turned on and you still can't see your phone on the
Find My Device website, check Google's troubleshoot the issue. When you're sure your Android device meets all the requirements above, you can look for it in a few steps. It's simple, so you shouldn't have any trouble getting your phone back, as long as it isn't in the middle of the ocean. You don't need to install an app. All you
need is a device with a web browser and an active internet connection. Visit the Google Find My Device website. Sign in to your primary Google account. Click the lost phone in the upper-left corner. A Google Map appears, showing where your Android smartphone is located. If it's turned off, you'll see your phone's location from when it was last on
the network. Click Play Sound to ring the phone for five minutes, even if it's on silent/vibrate. Click Secure Device website allows you to display a message on the lock screen, providing the person who found your phone with pertinent
information for returning it. However, you can't do anything if the device is turned off or not connected to the internet. Still, your actions are performed swiftly when it's turned on or connected. If you don't see the Find My Device app
from Google on your device, download it from the Play Store. If you're a visual learner, check out this comprehensive YouTube video from Google Pixel phone for this to work. Samsung devices can be found in a similar way, although you'll need you
Samsung login credentials to do so, which is a tougher task than a Google login. Even if you located your lost Android phone, that doesn't mean you can retrieve it. Maybe you left it somewhere, but it could have walked off with someone who chose not to return it. Still, you don't want your valuable information to fall into the wrong hands, so you'll
want to take action to nuke an unrecoverable device. Android provides several convenient options that help you keep your device safe without physically retrieving it. After locating mechanism. Additionally, it allows you to erase the device to keep your
personal data safe. Find your Android phone using Find My Device on the web (check the steps above). Click Secure device and follow the on-screen instructions to delete all data. It's always important to use a proper backup
solution, ensuring your data is always safe, even if you lose your phone or don't have access to it. Smart speakers are for more than asking questions and playing music. Your handy Google Home and the Google Assistant housed within can help you track down your lost smartphone. That is, as long as it's within earshot of you and your search party. All
you do is say, "Hey Google, where's my phone?" The smart speaker rings your device, even if it's set to vibrate or Do Not Disturb. This won't help you find your phone on a map. However, the loud ringing should end your phone is still lost, it may
be time to call it a day. If you need a new phone and your budget is a bit tight given the loss of your device, check out carrier deals and our favorite budget phones. A phone insurance plan is also a good idea, and most carriers offer inexpensive monthly options that can be added to your bill. You'll also want to keep your phone number and IMEI
number on hand, as you can provide those details to your carrier if you can't find your phone. Your provider should be able to block the number and deactivate the SIM so that no potential thief can steal your identity. You should also check your carrier if you can't find your phone. If you're
getting a "Google phone number cannot be used for verification" error message, you can get a temporary number online. Learn more from the experts. Key Takeaways Your Google phone number verification could fail for various reasons You can try contacting Google support for help, but this may not yield results Your best bet is to get a new
temporary phone number to sign up Creating a new account on popular platforms like Facebook, Google, or Instagram generally means the system will require you to provide a phone number. This protects your account from malicious activities by verifying that it's indeed you trying to access your account when you log in. You may, however,
unexpectedly get an error message that the phone number cannot be used for verification. This message can be annoying because regardless of the phone numbers you enter, you won't be able to gain access to your account. You're reading this guide because you're looking for a way to navigate this frustrating situation. It may seem like contacting
Google is the next best step, but that may not always be the easiest way out. You may have noticed from Google's contact page that there's no means of reaching the support team. Searching for "this phone number cannot be used for verification" may not yield results, either. Getting locked out of your Google account because your phone number
cannot be used for verification is frustrating, and to make matters worse, Google indicates that "you still may not be able to recover your account after finishing the process." What should you do if you get the message, "this phone number cannot be used for verification"? Here's what you need to know. Why Does Google Ask for a Phone Number to
Verify an Account? One of the most significant reasons Google asks for your phone number to: Check your identity against other registered records on the platform Verify that you're an actual human and not a robot or automated program searching through Google Prevent identity theft, especially if
you have turned on two-factor authorization through the phone It's also easier to recover your account and change your passwords more quickly if you have turned on phone number, causing it to fail at the verification stage. These
include: The phone number was used on spam listings The phone number on other web properties is different The phone number cannot be used for verification" message when opening a new account could also mean you've used the same number to
open too many Google accounts. You may have exceeded the limit for a single phone number. You Can Verify a Google Account Without a Phone Number The first step in rectifying this error message is to confirm that you entered the correct number. It's also vital to ensure you have a valid country code. If you do this and still get the error message,
move to the next step. Skip Phone Verification on Google You can circumvent the verification step by creating a Google account without a phone number. At the point where the system asks you to enter a phone number, leave the field blank and click next. Here are steps to follow:Go to Gmail Select the Create an Account button Input your full name
and username Create a strong password Click Next Leave the phone number field empty Enter your account later when you need to do. It's therefore highly recommended to use a temporary or burner phone
number in these situations. Register Your Gmail Account with Another Number, so your next best option, in this case, is to acquire a new number can be
the solution you need to stop getting the "this phone number cannot be used for verification" error message. Use a Burner Phone Number to Get the Verification Code A burner phone number seffectively help you to: Verify your account
on various services Protect your identity Protect your private phone number Protect your spam text messages and robocalls A burner number. Most of them also have a short activation period, after which you can't use them any
longer. Buy a Temporary Phone Number Getting a temporary phone number from a verified provider to create your georgie account is your best bet in navigating the verification codes online; instead, you're using a secure temporary phone number. The
phone number you get is authentic and supported by major USA-based carriers. It'll allow you to sign up into your Gmail, Facebook, or Instagram account with no issues. Connect to your account's dashboard via internet services are required to
access and enjoy this service. All these methods are solid options for accessing your accounts without using your private phone number. A temporary Phone Numbers Online The pros at Tardigrada can help you receive a Google SMS verification code
online by providing you with a temporary phone number. solutions to meet your needs. In this article, we'll walk you through the steps to locate your lost iPhone without using "Find My Phone." Let's dive in! Yes, it's possible to track an iPhone without Find My Phone. The solutions and their solutions are the solutions and their solutions.
in detail here. If you lost your iPhone when you were out, keep reading our article. Our methods below will help you track an iPhone using a phone number, an IMEI number, or even directly through Google Maps. Can you remember whether your iPhone using a phone number, an IMEI number, or even directly through Google Timeline can
help you out. This tool keeps a record of your location history, letting you see where your device has been, even if it's not online right now. Unlike real-time tracking, Google Timeline offers a comprehensive history of previous locations, which can be essential if your phone goes missing or gets stolen. Here are the steps on how to trace your lost device
on Google Timeline for free: To begin with, open Google Maps Timeline on your browser. Sign in using the Google account that was linked to the iPhone. Once logged in, go ahead and select a specific date to view the device's location history. After you have noted the location of your device, make a quick move. If the iPhone is moving, you might see a
path of locations it has been to. Besides Google Maps itself, many third-party tools are integrated with this feature. So you can also use them to locate your lost iPhone. Click to know more: >> Best Mobile Number Tracker with Google Maps You must have heard of the GPS trackers. These apps are excellent for locating an iPhone outdoors. Among all
the GPS locating tools, TrackMobi is the one that is worth trying. Another reason this is our favorite tool is that it works across multiple platforms and doesn't require installation. Unlike traditional methods, here you can trace your loved ones' iPhones with very minimal details like their phone number. When you enter the number, it will instantly
show their last location. It is worth mentioning that this phone number tracker is not only for individual use but businesses can also benefit from it. TrackMobi's specialized services are designed to handle large datasets for companies. Here's how to use TrackMobi to track a missing iPhone: First of all, visit the page of TrackMobi's iPhone tracking
tool. Enter your phone number into the tracker. Start the search to pinpoint your iPhone's location. And that's it, we are done! Did you know your iPhone has a unique IMEI number that can be used to track it? This number acts as a digital fingerprint for your device and makes it possible to locate it even if the SIM card is removed. So, if you have lost
hope of finding vour phone or suspect it's been stolen, one reliable option is using TrackerCellPhone. It allows you to track your iPhone online using its IMEI number. If you don't know the IMEI number. If you don't know the IMEI number. If you don't know the IMEI number.
Follow the steps below to track your iPhone using an IMEI tracker: Now visit the website of Tracker Cell Phone in your browser. Enter your IMEI in the box appearing on the screen and then start the search. This tool will display your phone went missing at home or the office? Then these
techniques can save the day. Your Apple Watch is not just a watch, it can also serve as a tracker in some situations. This method is especially useful for locating devices that are misplaced nearby, and many users find the sound feature from Apple to be quite helpful. When activated, your iPhone will produce a loud pinging sound for about two
minutes, making it easy to find—particularly if it's close by and connected to the internet. To set up this alert, you need to visit Find My in advance. It can easily ping your iPhone and here is how to do it: First of all, open the Control Center on your Apple Watch. Tap the iPhone icon to trigger a sound on your device. Then, follow the sound to locate
your phone. If you've attached an AirTag to your iPhone, you can easily use the Find My app to find it. This tool can even help you find a phone that is dead. The great thing about AirTag is that you can easily use the Find My app to find it. Once you mark your iPhone as lost, it enters Lost Mode, which automatically disables any payments, cards,
or data sharing, and locks your device. So, it should be your number one step after losing your device. Open Find My on another Apple device or log in via iCloud. Select your AirTag from the list of devices. Use the map or precision finding to pinpoint your phone's exact location. The moment we realize we don't know where our phone is, we
experience a moment of utter worry. To make matters worse, we often can't tell whether it's somewhere in our house, at the office, or outside. This post is for anyone struggling to find a stolen iPhone without Find My iPhone. If your phone is lost nearby, devices like the Apple Watch and AirTag can significantly simplify the search. In case you believe
it has been stolen, you can use IMEI tracking to safeguard against theft or take advantage of services like TrackMobi for real-time GPS tracking. After offering solutions to locate iPhones without Find My iPhone, we can now take the next step and tackle your additional concerns about stolen or lost devices. Here are steps for you: To begin with, open Google Timeline on any device with you and sign in. Now, locate your iPhone at zero cost.
phone's location. If you have still not logged into iCloud or Find My, we have an option for you too. We suggest using TrackMobi. This is a three-step process and all you need to do is visit TrackMobi website. And then enter your phone in no time. Google's built-in "Find
My Device" service can be accessed from a browser by going to google.com/android/find. Any Android device that was signed into with a Google account will appear, no setup required. With so much personal stuff on our phone, and it can
track your phone without any previous setup. Find My Android with Google "Find My Device" app on a secondary Android device to locate the lost device. After signing in
with your Google account, you'll see your devices in the left sidebar. Select the device, and you'll see when it was last detected, the network it's on, and the battery. The location of the device is also shown on the map. Selecting the pin will open Google Maps to that location. Next, you can select "Play Sound." This will ring your device for up to five
minutes---regardless of ringer mode/volume---until the device is unlocked. The next few tools are especially useful for lost devices. We'll start with "Secure Device." The last tool is the most extreme. If you don't think you'll ever get the
device back or you're worried about someone getting into your personal stuff, you can erase everything remotely. If you do this and you get the phone back, it will need to be set up from scratch again. There's no going back after this. Of course, all of these things
rely on your lost phone being powered on. You won't be able to track it or remotely do anything if the battery has died or someone turned it off. To track an Android phone, you can go to google.com/android/find to see all the devices attached to your Google account on a map. It can also be viewed from a secondary Android device with the "Find My
Device" app. Navigate to the Find My Device website and sign in with the same Google account as the Android device you'd like to track. Your devices are shown in the left sidebar---choose a device to see when it was last active. If the device is powered on, you'll be able to see the location on a map. Click the pin to open the location in Google Maps.
To continue tracking the device, you can simply refresh the page to see if the location has updated. You will not be able to see the real-time location if the device, you can simply refresh the page to see if the location has updated. You will not be able to see the real-time location has updated. to smartthingsfind.samsung.com. Samsung Galaxy devices also come equipped with Google's Find My Device tool. If you didn't sign into a Samsung account on your Galaxy device, it will not appear in SmartThings Find. Navigate to the SmartThings Find website in a browser and sign in with your Samsung account. Select a device from the menu on
the left side of the screen. You'll see a menu with a bunch of useful tools will appear when you select a device for up to one minute, even if the ringer/volume is silenced, until the device is unlocked. The "Ring" feature will ring your device for up to one minute, even if the ringer/volume is silenced, until the device is unlocked. The "Ring" feature will ring your device for up to one minute, even if the ringer/volume is silenced, until the device is unlocked.
message on the lock screen. If your device has been stolen, you'll probably want to use the "Back Up" and "Erase Data" will, as you might expect, completely wipe everything off the device and bring it back to factory settings. Here's a roundup of
what the other tools do. Not all of these tools are available for every device type. Track Location: Updates the location of your device every 15 minutes. Retrieve Calls/Messages: Shows your call log and SMS messages from the device. Unlocks your phone if you forgot the password, PIN, or pattern lock. This needs to be manually enabled (see
below). Extend Battery Life: Turns on the most extreme battery saver mode. If you're just trying to find your iPhone or Android devices, the feature is part of the Find My Device suite shown above. On the iPhone, it's a feature of the
Google Home app. To find an Android device with Google Assistant, simply say "Find my phone" to the Assistant app or a Google smart speaker. It will ring until you unlock the device you'd like to find. As long as the device you'd like to find. As long as the device is powered on, it will ring until you unlock the device you'd like to find an iPhone with Google Assistant, you'll need to do some prep
beforehand. The Google Home app must be installed and signed in on the iPhone. Then, in the app, go to Settings > Notifications, and toggle on Critical Alerts. Now you can ask a Google smart speaker to "Find my iPhone." A notification will appear, and the device will begin ringing until you dismiss it. Keep in mind that since
this method relies on an app, it can be blocked by Do Not Disturb or Focus Modes. There are other methods for finding a lost iPhone that may work better. The beauty of Google's service has a slight edge since you're required to sign into a
Google account to use an Android device. You technically don't need to sign into a Samsung account to use a Samsung Galaxy device.
