## Mold testing atlanta

We have used Zack a couple of times now to test for mold on properties and he is quick while being very thorough. His report is very useful, including how to remediate various items on the report. He took his time and walked us through the report, outlining exactly what we were looking at. I would highly recommend him for any testing that you need done!— Dennis L. Asbestos testing costs depend on the size of your home, its condition, and your location. This test ensures your home is safe from this hazardous material.Concerned about asbestos in your home? Learn how to identify, manage, and safely remove this hazardous material with expert guidance on abatement methods, regulations, and best practices.    Mold spores are all around us - indoors, outdoors, in the air, on our carpet, on our plants - in fact you're breathing mold at this very moment as you read this web page. Mold is almost always present in low levels and invisible to the naked eye during early stages but can multiply rapidly in the presence of moisture and a food source making it visible in larger numbers.    Some people are more sensitive to mold than others. For these people, exposure can lead to symptoms such as stuffy nose, wheezing and red or itchy eyes, or skin. Others with allergies to molds or with asthma, may have more serious reactions.    The dangers of mold to humans are well known, but toxic mold can also endanger the health of pets as well.    Although only a handful of mold species are toxic, the most common type - toxic black mold (Stachybotrys) - can bring serious illnesses and even death to pets, especially dogs.    Dogs are affected by mold in similar ways to humans. Because dogs have a weaker immune system, they're more susceptible to mold-related illnesses. Some dog breeds may develop mold allergies faster than others. For instance, breeds with flat faces and short noses are prone to respiratory diseases, so exposure to fungus can make it even worse for them. But in general, all dogs can be affected by mold.    The most common types of fungus in homes are Aspergillus, Cladosporium, and Stachybotrys (or Black Mold). All of these can cause allergic reactions and health problems in humans and pets. If left untreated, molds can cause serious health problems.    During your home inspection, in addition to scanning for visible issues with the structure, systems, and components of the property, we're in a unique position to both scan for visible mold, as well as seek out the main contributors to its growth.    Water intrusion, high levels of humidity, plumbing leaks and HVAC problems can all cause mold issues.    While it's critical to know whether a home has a mold issue, it's also of paramount importance to know what's causing the mold growth to effectively deal with the problem. That's why having a mold / air quality test during the course of your home inspection (and performed by the same inspector) can be so much more beneficial than having a standalone test.    In addition to inspecting the ins and outs and all of the crevices of your future home, our mold testing involves two main methods: air sampling and surface sampling (if applicable), which require analysis by a certified laboratory (with a guaranteed 24 to 48 hour turnaround time - except weekends).    Samples taken during the course of the inspection are immediately sent (overnight) to a laboratory at which time they are analyzed for type and concentration. You'll then receive a separate inspection report from us with photographs, lab results, a detailed narrative interpretation of the test results, and any remedies that may be needed. Standalone Mold Inspection with Air Sampling - \$350 to \$450 depending on the size of the home. With Home Inspection - \$275    When placing your home inspection order via the website you will have the option to add-on this service as needed. We are MICRO Certified and all lab results and reports are guaranteed 24 to 48 hours from the date of the inspection. Request your free consultation today. Mold is another scary threat to your family's safety. No one wants to buy a house with a mold problem. Unfortunately, these sneaky little spores aren't always easy to detect. Mold in your home can be very dangerous to your health. Certain mold spores are known carcinogens and others can lead to respiratory disease, allergic reactions, and other health issues, in addition to compromising the integrity your home's building construction and structure. Atlanta Property Inspections can test your home for mold, take samples when necessary, and make recommendations for mold removal or remediation. Call To Schedule Mold is a natural part of the environment, and even fairly common indoors. However, mold spores must be monitored to prevent growth. The best way to control mold growth is by controlling moisture and humidity. No matter how hard you try to maintain humidity levels, though, mold may grow where you don't see it. Hire an extra set of eyes in a mold inspector. An annual or biennial mold inspection can save you from a headache down the line. Residents in Atlanta can leave the work to an experienced mold inspector in Atlanta by calling Atlanta Property Inspections. We are a tried-and-true company with over 25 years of industry experience. We look forward to taking your call and answering any of your questions or concerns. Call now to schedule a flexible appointment. Call To Schedule If you have ever seen mold growing on walls or ceilings, then you know it is visually repugnant at best. The mold growth can destroy wallpaper and paint. The risks of mold go further than the aesthetic of your walls, floors, and ceilings though. Mold can give off an awful stench and is harmful to your health. They produce allergens and irritants that can cause you to experience symptoms such as sneezing, runny nose, red eyes, and skin rash. Mold can also irritate the nose, throat, and lungs. This threat is especially serious for people with asthma and allergies. Mold can also damage your property. It feeds on organic materials such as wood, wallpaper, drywall, carpet, fabrics, and even glue. If ignored, mold growth can even lead to the deterioration of ceilings, walls, and floors. Call To Schedule We have established that mold is harmful for your health as well as the aesthetic and structural integrity of your building, but what can you do about it? For one, reduce indoor humidity to between 30% and 60%. You can do this by venting moisture-generating sources such as the bathroom, laundry rooms, and basements. You can also employ exhaust fans when cooking and dehumidifiers in general. Still, how do you know your property is free of mold? Mold can grow within walls and ceilings as well. This is why a mold inspection in Atlanta is crucial. Our mold testing employs sophisticated tools and technology to quickly and safely pinpoint mold growth. Call Atlanta Property Inspections to schedule an appointment with a mold inspector in Atlanta today. It is going to be nice knowing your property has passed the mold testing, but what if the inspector missed a spot? Don't worry. We offer a warranty on our inspections so you can rest assured knowing you are covered. Call today to learn more about our buyer protection plan. Residents in Atlanta can put an end to their web search for "mold inspection near me." Atlanta Property Inspections is happy to serve all areas of Atlanta. Call now to speak with a live representative and schedule a convenient appointment. We are ready when you are. Mold Inspection Sciences of Atlanta provides the following services: mold testing, mold inspection, mold detection, mold-related illness (CIRS) inspection and testing, mold remediation protocols and support services, post-remediation clearance testing, drinking water sampling and testing, and environmental risk assessments and monitoring for organizations requiring regulatory compliance. For over 20 years Mold Inspection Sciences of Atlanta has executed tens of thousands of mold investigations across ten states - more than 75,000 inspections to be exact. Our proven science-based expertise helps us determine exactly what's impacting our clients. We only perform mold inspection and testing services, never remediation. This means you get trusted recommendations and next steps to help solve the issue that's impacting you without any conflict of interest. Atlanta Mold Testing is a company of highly trained mold inspection specialists right here in Atlanta. We provide an unbiased means of mold inspection. This means we do not perform mold remediation but will assist you in detailing a step-by-step protocol of how to remove the mold, whether that be through a mold remediation service or by yourself. Most home-owners, home sellers, and/or renters/rentees should have a mold inspection done as to be sure there are no unexpected hazards in the future. We have certified mold inspectors that will come to your home or property and inspect it thoroughly. We begin with a visual inspection to find areas of mold contamination or possible mold contamination. We focus on areas where leaks or high moisture levels are suspected. Our mold inspection specialists shall use tools like infrared cameras and moisture meters to determine where these potential areas of concern are located. We then will take samples such as air samples and samples of mold off of the structure and send it to a AIHA certified lab for further testing. Once the lab has tested the mold and air samples they will send us a detailed report on things such as: Elevated levels of mold The amount of the mold growth The species of the mold and more... Atlanta Mold Testing strives to provide you with 100% satisfaction. We will give you the best possible mold inspection & testing service in Atlanta. All of our Atlanta mold inspection specialists conduct mold inspections and mold testing in accordance with accepted IIIRC, EPA, AIHA, ASHRAE, NIOSH, NYC and OSHA guidelines and recommendations regarding indoor environmental quality. Get a Mold Inspection Now Call (404) 585-7906 Mold can exist in an environment for years without anyone detecting it. People often mistake their reactions to mold for reactions to other common allergens, like pollen or dust mites. While these allergens can lead to severe allergic symptoms, they are generally non-toxic.Molds can harm the health of people and pets exposed to them. They can also damage a building's structure. Mold can cause rot, the deterioration of insulation materials and unsightly stains on interior surfaces.Because molds need moisture to thrive, its presence indicates a leak or moisture problem. If not found, building leaks can harm the structure and stability of a building. This can endanger lives and lower the property's value.Mold exposure can cause respiratory issues, skin and eye irritation, headaches, and fatigue. Prolonged exposure may worsen existing respiratory conditions, particularly for individuals with mold allergies or asthma. After the mold inspection and testing, we'll provide a detailed report of our findings, including the type and concentration of mold present. If mold remediation is necessary, we'll develop a comprehensive plan tailored to your property's specific needs.
