

Click to prove  
you're human

To reduce the size of an image, follow these easy steps: First, select an image format from the drop-down list and choose the quality you prefer. The lower the quality, the smaller the file becomes. Click on "Start" to begin the compression process. Alternatively, upload your image via browsing, drag & drop, or using a link or cloud storage. Then, choose the desired compression rate - there are four options to select from depending on how small you want the final file size to be. Select one and click "Convert". Your image will automatically be converted into JPG for optimal compression. Compressing Images with Pi7 Image Tool's Powerful Compressor Our image compressor is designed to make compressing images a breeze, whether you need to reduce the size for a specific purpose or enhance the quality for better visual representation.
