Golden Star is my latest digital line art for members of my monthly intermediate coloring group, Color Wonk. Every month, Color Wonk members receive a new coloring challenge plus a full livestream demonstration with audience Q&A. Receive feedback on your project in our exclusive forums or even personal coaching. Learn easy fine-art techniques
to improve the look of your coloring AND make coloring easier! Golden Star digital package is exclusive to Color Wonk in December 2024 and January 31, 2025. This project may return as a coloring kit in 2025. Gold seems so hard to draw - so today, I'm simplifying it for you. I'm about to show you the easiest way to draw
gold with colored pencils - although you can actually do this markers or other mediums too! We're going to start by looking at the basic colors you'll need, and some simple pattern methods to create the shiny gold appearance - then I'll show you a few different ways to use this in your actual art or coloring books and some bonus tips if you really want
to create something realistic. You can also apply this technique to create other shiny surfaces like silver, metal, rose gold or silk, simply by changing the colors you are using. Check out the video below, and scroll down for all my resources to start practicing your gold drawings! Disclaimer: This post contains affiliate links and I may earn a commission
if you click them and make a purchase (at no cost to you). FacebookXBlueskyRedditEmail I create coloring books, color palettes, printables and tutorials to help you release your inner artist and improve your coloring. Choose a category below, light
 brown, and dark brown. Layer strips of connecting white, yellow, light brown, and dark brown colored pencil shades to create a reflective, multidimensional gold gradient until the object is filled in. Ensure a hyper realistic gold sheen
by blending your gold gradients using a cotton swab or your finger. 1 Mix white, yellow, light brown, and dark brown pencils. You
can play around with different pencil shades to make your ideal hue. Gold is an incredibly versatile shade made up of multiple colors, so you have plenty of options to choose from, like dull gold, choose white, light yellow, yellow, and light
brown shades. 2 Use your colored pencils to create a gradient like the one above. While you could just mix your 4 shades together to make a solid gold color, realistic gold is actually made up of highlights and shadows since it's reflective. To capture this in your drawing, you'll want to make a gradient that's made up of your 4 shades. Practice making
a gradient like the one above—then you can incorporate it into your drawing once you get the hang of it.[2] Advertisement 3 Blend your shades together to achieve a seamless, hyper-realistic sheen.[3] Make sure to wipe off
your finger on a paper towel or use a new cotton swab between blending your gradient lines. If you don't alternate your cotton swabs or wipe off your finger when blending your gradients, you might drag the darker colors into the lighter ones, resulting in a less realistic blend. Advertisement 1 Apply a gold gradient to part of the object you're
coloring. Start at one side of the object, like we did in the vase above. Don't worry about filling in the whole object yeu reached the middle of the object you're filling in, reverse the color order starting with your second
lightest shade, and work your way backward until you reach the opposite edge of the object, finishing with your darkest pencil shade.[4] Depending on the various shades you've chosen, your pattern should look something like this: Dark brown, light brown, yellow, white, yellow, light brown, dark brown, and so on, layering these shades until you fill
your desired section entirely. 3 Lightly blend your gradient layers together. Using a cotton swab or your finger, lightly shade the color gradients in your art piece as you did on your practice gradient sheet to ensure a super realistic gold finish.[5] Don't press down too hard when shading with your colored pencils, as the pigment colors will become
more difficult to blend, and we don't want it to look blocky. 4 Go back in with a white colored pencil to enhance your gold's gleam. To create a gold shade that nearly glints off the page, grab your white colored pencil and further shade in the lightest parts of your chosen object to add even more luster, like in the vase above. You can apply more
pressure as you shade to saturate the white pigment on the page.[6] By going back in with your white pencil after blending, you're creating more contrast in the gold gradient, resulting in the illusion of a shinier finish—magic! Embark on a journey of artistic alchemy and discover the secrets of capturing the essence of this precious metal with the humble yet versatile colored pencil. To begin your golden masterpiece, select high-quality colored pencils that boast vibrant, lightfast pigments. Opt for metallic golds,
yellow ochres, and warm browns to create a rich and realistic golden hue. Experiment with different brands and pencil grades to find the perfect combination for your artistic style. Remember, the key to achieving convincing gold is in layering and blending, so don't be afraid to experiment with various techniques. As you start sketching your desired
 form, apply light, gentle strokes to establish the base color. Gradually increase the pressure as you build up layers, allowing each layer to dry completely before applying the next. For added depth and realism, use darker shades of gold in the shadows and lighter shades in the highlights. Pay close attention to the direction of light in your scene, as this
 will influence the placement of your highlights and shadows. How To Make Gold With Colored pencil A red colored pencil A prown colored pencil Start by drawing a light layer of yellow over the paper. Then, add a layer of
 orange over the yellow. Next, add a layer of red over the orange. Finally, add a layer of brown over the red. Blend the colors together with a blending stump or tortillon. You can also use a white colored pencils: Use a light touch when applying the colors. This will
help to prevent the colors from becoming too dark. Blend the colored pencil. This will help to create a smooth, even finish. Add highlights with a white colored pencils? To make metallic gold with colored pencils, you
 will need: A white or light-colored pencil A red colored pencil A red colored pencil A red colored pencil A silver colored pencil A silver colored pencil A silver colored pencil A silver colored pencil A red colored pencil A silver colored pencil A silver colored pencil A red colored pencil A red colored pencil A silver colored pencil A silver colored pencil A silver colored pencil A silver colored pencil A red colored pencil A silver colored pencil A silver colored pencil A red colored pencil A red colored pencil A red colored pencil A red colored pencil A silver colored pencil A silver colored pencil A red co
 colors together with a blending stump or tortillon. You can also use a white colored pencil to add highlights to the gold. Once you have created a base layer of gold, you can add metallic highlights with a silver colored pencil. Use a light touch when applying the silver pencil, and blend it well with the base layer. Once you have created a base layer of gold, you can also use a white colored pencil. Use a light touch when applying the gold pencil,
base to warm oranges and subtle browns, lays the foundation for capturing the metallic brilliance. The judicious use of white for highlights further enhances the reflective quality. Precision and practice become paramount as artists navigate the process of blending and detailing. This guide explores the artistry behind creating a dazzling gold effect
 with colored pencils, unlocking the secrets to infusing brilliance into your artwork. Creating a convincing gold color with colored pencils involves blending and layering different shades to capture the metallic sheen and richness associated with gold. Follow these steps to achieve a realistic gold effect: Materials Needed: Colored pencils (yellow,
orange, brown, and white) Quality paper with a smooth surface Pencil sharpener Eraser Step-by-Step Guide: Selecting the right shade of yellow is essential for creating a convincing gold color. Aim for a vibrant, medium-toned yellow is essential for creating a convincing gold color. Aim for a vibrant, medium-toned yellow is essential for creating a convincing gold color. Aim for a vibrant, medium-toned yellow is essential for creating a convincing gold color. Aim for a vibrant, medium-toned yellow is essential for creating a convincing gold color.
richness of the gold. This initial color choice will set the overall tone for your artwork. As you begin layering with orange, focus on the art of subtlety. Use short and controlled strokes to gradually build up the intensity of the color. Concentrate the orange in areas where the light hits the most, such as on raised surfaces or edges. This layering
 technique not only adds vibrancy but also creates a nuanced transition from yellow to the warmer tones of gold. Introducing a light brown adds depth and warmth to your subject and use the brown undertones to
emphasize these shadows, adding a sense of realism and three-dimensionality to your gold illustration. Building layers is where the magic happens. Alternating between yellow, orange, and light brown creates a dynamic interplay of colors. Experiment with the pressure on your pencils to achieve different tones and intensities. This layering technique
mimics the reflective quality of gold, capturing the way it interacts with light and shadow. Emphasizing highlights with a brighter yellow and a touch of white is like adding the finishing touches to your gold masterpiece. Apply these colors strategically on areas that catch the most light, such as edges and surfaces facing the light source. White, when
used sparingly, not only brightens the highlights but also enhances the overall reflective quality of the gold. The blending tool or your fingertip, do it with a light hand. The goal is to smooth out visible pencil strokes while preserving some texture, contributing to
the metallic effect. Avoid over-blending to maintain the character of your gold illustration. Sharpen your pencils regularly during this step to ensure precision in adding fine details. Use a sharp pencil to enhance intricate shading, especially in areas where light and shadow meet. Pay attention to refining edges and surfaces, erasing any unintended
marks or excess color. This refining process elevates the level of realism in your gold rendering. Allow yourself the freedom to experiment with different color combinations and techniques. Use a separate sheet of paper for practice to understand the behavior of your colored pencils and refine your skills. This experimentation phase is an opportunity
to fine-tune your approach, ensuring that you achieve the perfect gold shade that complements your artistic vision. Creating a realistic gold color with colored pencils requires a thoughtful approach and a few key techniques. Here are some tips to help you achieve a convincing gold effect: Begin with a medium-toned, vibrant yellow as your base color.
Choose an orange with warm undertones to layer over the yellow for added richness. Introduce a light brown for depth and to mimic the shadows in gold. Use short, controlled strokes to gradually layer the colors. Concentrate the orange on areas that would catch highlights, such as edges and raised surfaces. Start with a light touch and build up the
intensity slowly. Vary the pressure on your colored pencils to achieve different tones and depths. Light pressure allows you to capture the reflective quality of gold. Employ a brighter yellow and a touch of white to emphasize highlights. Apply
white sparingly to areas that catch the most light, enhancing the metallic appearance. White can also be used to blend and smooth transitions between colors. Avoid over-blending to maintain some texture, contributing to the metallic appearance. White can also be used to blend and smooth transitions between colors.
different strokes to create texture, especially in areas with intricate details. Introduce the light brown strategically to create shadows where they naturally occur, such as corners and crevices. Consider the light source in your composition and apply shadows accordingly for a realistic look. Keep your pencils sharp for precision in detailing and fine
work. Sharp pencils allow you to add intricate details, enhancing the overall realism of your gold illustration. Use a blending tool or your fingertip with a light touch to blend carefully to smooth out pencil strokes while maintaining some texture. Avoid over-blending, as it can diminish the vibrancy and depth of your gold color.
Before working on your final piece, practice on scrap paper to refine your technique. Experiment with different color combinations and find the right balance for your specific artwork. Periodically step back from your work to assess the overall effect. Check for areas that may need more layering, blending, or detailing to achieve the desired gold
appearance. Should I use white to enhance the gold color? Yes, sparingly. Use a brighter yellow and a touch of white for highlights without over-blending when creating gold with colored pencils? Blend lightly with a tool or fingertip to maintain texture, preserving vibrancy and depth. What role does pressure play in
achieving a realistic gold effect? Vary pressure for subtle highlights (light pressure) and depth (heavier pressure) and depth (heav
balance of color selection, layering, and blending techniques. By starting with a vibrant yellow base and gradually incorporating warm oranges and light browns, artists can achieve the richness and depth associated with gold. The judicious use of white for highlights, along with careful blending and consideration of shadows, adds a reflective quality
that mimics the metallic nature of gold. Regularly sharpening pencils and practicing on scrap paper contribute to refining the skill. Through experimentation and attention to detail, artists can unlock the secrets to producing stunning and realistic gold hues in their colored pencil artwork. Sooner or later all the artists encounter a situation in which
they need to know how to make gold with colored pencils. This article will reveal all the secrets and tips on what colors Are Used to Depict the Texture of Gold? The first thing that comes to mind when there is a need to achieve an effect of the gold texture is using a yellow
pigment. Furthermore, it's highly likely that there are supposed to be a few tones. However, let's recall that the surface of the precious metal is usually shiny, so you will need additional colors to render it. In particular, you will need something light-toned for depicting patches of reflected lights. The highlights are usually accompanied by the shade,
and that is why you will also need some dark pencils. For instance, brownish and reddish tones are as good as possible for such a purpose. Now, I hope you won't have any questions like "What colors do I need?" to draw gold. Basic Techniques for Drawing Gold with Colored Pencils The first thing that you need to do is to contour a shape with a light,
usually yellow, pencil. For sure, you can find the best matching tool in Crayola sets. Then, using a white color, leave some spots that will serve as highlights. Beneath them, blend two tones, brownish and reddish, by hatching them. Then cover these patches with a yellow tone using the hatching technique. I use my Prismacolor pencil for this purpose,
but you can take whatever brand you want. Top Colored Pencils to Blend for Gold Color on Amazon Here are my recommendations for selecting colored pencils that can be used for drawing gold and other precious metal colors. This table showing the main features of the decent sets from popular brands will help you select the best option for you.
