

```
Home North America United States Louisiana, a state in the United States, shares its borders with Arkansas to the north, Mississippi to the east, the Gulf of Mexico to the southeast, is divisible into five primary geographic
regions: North Louisiana features rolling hills in the northwestern part and the flat, rich alluvial plains to the Mississippi Delta in the north estern areas. It is defined by a landscape that gently rises from the coastal plains to the more fertile soils of the
interior uplands, suitable for agriculture. Central Louisiana is characterized by the Red River and its fertile valley which flows through it, contributing to the region and offers a mix of pine hills, hardwood bottoms, and prairies. The highest
point in the state, Driskill Mountain, stands at 535 feet (163 meters) and is located in Bienville Parish, in the northern part of this central region. Acadiana is a culturally rich region known for its Cajun and Creole heritage. It is largely flat, with extensive wetlands including the Atchafalaya Basin, which is the largest wetland and swamp in the United
States. The terrain here is interspersed with bayous, marshes, and agricultural land. The Florida Parishes lie to the east of the Mississippi River, north of Lake Pontchartrain and the Mississippi River. The sandy soils and bluffs here
contrast with the flatter, deltaic lands of the southeastern regions. Greater New Orleans is situated at the mouth of the Mississippi River and includes the city of New Orleans and its surrounding metropolitan areas. It is known for its deltaic system, which has created intricate networks of waterways and is pivotal to the city's existence. This region
lies at or below sea level, with the lowest point in Louisiana, New Orleans, sitting at -8 feet (-2.44 meters) below sea level. Islands and Major Bodies Of Water include a series of barrier islands that protect the coastline, such as Grand Isle, and major lakes like Pontchartrain, Maurepas, and Salvador. The Mississippi River, a defining feature of the
state's geography, provides a vital waterway for the country and significantly influences the landscape of the surrounding regions, contributing to the fertile soils of the delta. The Red River are also significantly influences the landscape of the surrounding regions, contributing to the fertile soils of the delta. The Red River are also significantly influences the landscape of the surrounding regions, contributing to the fertile soils of the delta. The Red River are also significantly influences the landscape of the surrounding regions, contributing to the fertile soils of the delta.

West Carroll, West Feliciana, Winn. With an area of 135,658 sq. km, the State of Louisiana is the 19th smallest and the eastern shores of the Mississippi River is Baton Rouge - the capital and the second-largest city in Louisiana. It also serves as a political hub and
an industrial center of the state. Situated in southeastern Louisiana, along the Mississippi River is New Orleans - the largest and the most populous city in Louisiana. It also serves as a major port, cultural, commercial, and economic hub of the state as well as the Gulf Coast
(Deep South) region of the South-Central United States. Louisiana shares its borders with the State of Texas in the west, with Arkansas in the north, and with Mississippi in the east. It is bounded by the Gulf of Mexico in the south. Regional Maps: Map of North America This page was last updated on January 30, 2024 Geography & Travel States &
Other Subdivisions Louisiana, constituent state of the United States of America. It is delineated from its neighbours—Arkansas to the west—by both natural and man-made boundaries. The Gulf of Mexico lies to the south. The total area of Louisiana includes about 4,600 square miles (12,000 square km) of
inland waters. The capital is Baton Rouge. Admitted to the union in 1812 as the 18th state, Louisiana commands a once strategically vital region where the waters of the great Mississippi-Missouri river system, draining the continental interior of North America, flow out into the warm, northward-curving crescent of the Gulf of Mexico. It is not
surprising that seven flags have flown over its territories since 1682, when the explorer René-Robert Cavelier, sieur (lord) de La Salle, placed a wooden cross in the ground and claimed the territories since 1682, when the explorer René-Robert Cavelier, sieur (lord) de La Salle, placed a wooden cross in the ground and claimed the territories of cultural heritage run like bright threads through many facets of the social, political, and
artistic life of the state. Capital: Baton Rouge Population1: (2020) 4,657,757; (2024 est.) 4,597,740 Governor: Jeffrey Landry (Republican) Date Of Admission: April 30, 1812 State Bird: eastern brown pelican State Flower2: southern magnolia
Louisiana iris State Song: "Give Me Louisiana" "You Are My Sunshine" Seats In U.S. House Of Representatives: 6 (of 435) Time Zone: Central (GMT – 6 hours) Total Area (Sq Mi): 52,375 LouisianaAn old plantation home in Louisiana. With parts of its land lying farther south than any portion of the continental United States
except southern Texas and the Florida peninsula, and with New Orleans, its largest city, lying on roughly the same parallel as Cairo, New Delhi, and Shanghai, Louisiana owes much of its complex personality to its geographic position. The subtropical climate of the state has provided the magnificent brooding scenery of the coastal bayous, and the
lush, dank vegetation of its shores conceals a wealth of petroleum and natural gas. The fertile soil covering much of the terrain made Louisiana a rich agricultural area by 1860, with flourishing sugarcane and cotton plantations. A lumber boom occurred at the turn of the 20th century, and Louisiana underwent rapid industrialization after World War
II. Mineral output is great, and the state ranks among the country's leaders in oil and gas production. But progress has not been without its tragic and turbulent aspects: bitter territorial disputes and violent internal struggles for political power impeded the social and economic development of the state and crippled many of its political institutions.
The wealth of the plantations was accumulated through the extensive use of slaves, whose descendants comprise nearly one-third of Louisiana's population and whose culture has contributed much to the social fabric of the state. Racial conflict marked the development of the state from the American Civil War period (1861-65) and Reconstruction
(1865-77) through the civil rights movement of the 1950s and '60s. The guarantee of suffrage (through the Voting Rights Act [1965]) and ever-increasing African American political involvement, however, have helped move the state toward being a more racially egalitarian society. Since the 1960s the state's economy, tied closely to the fluctuating oil
industry, has experienced slower economic growth and less diversification than many other Southern states. More recently, corruption in state politics and an explosion of crime in the New Orleans area have marred that city's colourful image. Although the rich cultural heritage of the state is still enjoyed by many, tourism declined precipitously and
businesses and residents suffered major losses after Hurricane Katrina devastated parts of the Gulf Coast (including New Orleans and other parts of Louisiana) in August 2005. Area 52,375 square miles (135,651 square km). Population (2020) 4,657,757; (2024 est.) 4,597,740. 50 States, 50 Fun Facts Quiz Three types of regions are found in Louisiana:
lowlands, terraces, and hills. The lowlands consist of the coastal marshes and the Mississippi floodplain, with its natural levees and moderate relief. The Red River valley has a low-elevation relief, with red soils in its alluvial plain and many raft lakes built by impounding water from logjams. The terraces include much of the so-called Florida Parishes to
the north and northeast of the Mississippi delta, as well as the prairies of southwestern Louisiana. Hills flank the Red River valley and lend contour to the northwestern Louisiana. wetlandsWetlands area in the Atchafalaya River basin,
southern Louisiana. Louisiana shares the general physiographic characteristics common to the Gulf Coast states of the southern United States, with the vital exception of the Mississippi River, which borders and then flows through the state and extends its delta far into the Gulf of Mexico. The changing course of this great North American river has
created the huge Atchafalaya River basin and has dumped tons of sediment along the coast. Despite this, the beachless coast of Louisiana is eroding; at the end of the 20th century, land was vanishing at a rate of about 24 square miles (62 square km) per year. This loss has been caused in part by the system of levees (or embankments) constructed by
the federal government to keep the Mississippi in a central channel, which left side channels open to erosion. In 2005 Hurricane Katrina eroded an additional 73 square miles (189 square km) of the Louisiana coastland. The soils of Louisiana coastland. The soils of Louisiana have been one of the state's priceless resources; more than one-fourth of the total land area is covered by the
rich alluvium deposited by the overflowing of its rivers and bayous. Muck and peat soils are found within the coastal marshes, while the bottoms hold rich alluvium and loessial, or windblown, soils. Within the uplands, or hills, there are more-mature
soils that are less fertile. Apply online for licensure as a Physician Acupuncturist or a Licensed Acupuncturist through the State Board of Medical Examiners. Find Acupuncturists licensed through the State Board of Medical
Examiners. Find Addiction Counselors licensed through the Addictive Disorder Regulatory Authority. Full profiles of the Louisiana children in need of adoption are available online via the Department of Children & Family Services. Apply to qualify as a Notary Public.
